"The mock test of the NCFM Technical Analysis was helpful for me in learning the finer points of technical analysis that I used to find difficult. The mock test was designed such that it forced me to deal with each subject systematically, and this improved my grasp on market analysis tools and charting techniques. I entered the exam with confidence and optimism and am glad to say that I cleared it with ease."

QUES 1:- What does 'bullish' market mean?

- A- Prices will decline.
- B- Prices are expected to rise.
- C- The market is unstable.
- D- No price requirement is expected.

Ans- B

Explanation: A bullish market occurs when prices are increasing and the investors believe the price will continue to go up.

QUES 2:- Which of the following is a trend-following indicator?

- A- Moving Average
- B- Stochastic Oscillator
- C- RSI (Relative Strength Index)
- D- Fibonacci Retracement

Ans- A

Explanation: The purpose of moving averages is to smooth price data to gain directional bias.

QUES 3:- What is RSI in technical analysis?

- A- Real Strength Indicator
- B- Relative Strength Index
- C- Relative Stock Indicator
- D- Real Stock Index

Ans- B

Explanation: RSI stands for Relative Strength Index, which is a momentum tool that measures the speed and change of price movements to identify overbought or oversold conditions.

QUES 4:- Which of these is a type of chart used in technical analysis?

- A- Line chart
- B- Bar chart
- C- Candlestick chart
- D- All of the above

Ans- D

Explanation: Technical analysis can be represented in price movements through line charts, bar charts, and candlestick charts.

QUES 5:- What is a support level?

- A- A support level where a downtrend is predicted to finish.
- B- Vital price level from which a new uptrend is anticipated
- C- A price level where prices tend to reverse back up
- D- A price level at which no trades are executed

Ans- C

Explanation: A support level is a price at which an asset tends to receive buying interest that prevents the price from falling even lower.

QUES 6:- What does a 'head and shoulders' signal?

- A- Continuation of the trend
- B- A reversal of the trend
- C- Increased volatility
- D- No trend change

Ans- B

Explanation: Head and shoulders is a reversal pattern that indicates a change in the direction of the trend— from upside to downside.

QUES 7:- What will be the indicator of the show of the market momentum?

- A- PE ratio
- B- MACD (Moving Average Convergence Divergence)
- C- Bollinger Bands
- D- Fibonacci Levels

Ans- B

Explanation: The MACD is a momentum trend-following indicator that shows the relationship between two moving averages.

QUES 8:- What does a 'Doji' candlestick mean?

- A- Strong trend
- B- Indecision or reversal
- C- High volatility
- D- Continuation pattern

Ans- B

Explanation: When the open price and close price are similar to each other, it is known as a doji candlestick. If we look at a chart, we can understand that we have an indecisive situation, and sometimes it means a trend reversal.

QUES 9:- What is a breakout in technical analysis?

- A- When price moves outside a defined range
- B- A stock hitting a support level
- C- When volume drops
- D- When the RSI goes into overbought territory

Ans- A

Explanation: A breakout is when the price breaks through a resistance or support level and signals the potential for a new trend.

QUES 10:- High volume during an uptrend is a sign of?

- A- The Trend is weakening.
- B- Strong trend, looks like it will continue.
- C- The Trend is reversing.
- D- The market is overbought.

Ans- B

Explanation: The trend is strong and likely to continue.

QUES 11:- Why do we use Fibonacci retracement?

- A- To forecast future pricing objectives
- B- Own purposes to determine potential reversal levels
- C- More in the prediction of market volatility
- D- As an indicator of market sentiment

Ans- B

Explanation: Fibonacci retracement levels are used to identify areas of the market where the prices reverse or support/resistance.

QUES 12:- What does the MACD histogram tell you?

- A- Trend direction
- B- Strength of the trend
- C- Momentum shift
- D- All of the above

Ans- D

Explanation: The MACD histogram, which measures the difference between the MACD and the signal line, is a great indicator of trend strength, trend direction, and momentum shifts.

QUES 13:- What does an 'overbought' condition usually mean?

- A- Buy signal
- B- Sell signal
- C- Market stability
- D- No action is required.

Ans- B

Explanation: An overbought condition (RSI above 70) usually means that the market is due for a reversal.

QUES 14:- Which of the following is a lagging indicator?

- A- Moving Average
- B- Stochastic Oscillator
- C- Bollinger Bands
- D- RSI

Ans- A

Explanation: As an indication that they are based upon historical price data, they are called lagging indicators because they react to look back at the trends after the event has already occurred.

QUES 15:- What's the importance of the 200-day moving average?

- A- It reflects a short-term behavior.
- B- It shows indicators of long-term trends.
- C- It signals market tops.
- D- It predicts changes in the economy.

Ans- B

Explanation: The 200-day moving average is a widely tracked long-term trend indicator and demonstrates the general direction of the market over an extended period.

QUES 16:- Which of these candlestick patterns is a bullish reversal?

- A- Engulfing pattern
- B- Shooting star
- C- Dark cloud cover
- D- Hanging man

Ans- A

Explanation: An engulfing pattern (i.e., a small red candlestick followed by a large green candlestick) indicates a potential reversal from bearish to bullish.

QUES 17:- Which of the following is not a component of Dow Theory?

- A- The market discounts everything.
- B- Volume confirms trends.
- C- Any market moves three ways: cycle, trend, and minor.
- D- Fibonacci retracements are the bee's knees.

Ans- D

Explanation: Dow Theory is concerned about market trends, time, and volume; however, it does not mention Fibonacci retracements.

QUES 18:- What are Bollinger Bands used for?

- A- For tracking the volatility of price
- B- However, to confirm overbought or oversold conditions
- C- To predict price targets
- D- To indicate trend reversal

Ans- A

Explanation: Bollinger Bands are a moving average along with two standard deviation lines above and below it, allowing you to measure price volatility as well as identify overbought or oversold conditions.

QUES 19:- What does a cup with a handle pattern tell you?

- A- Continuation bullish pattern
- B- Bearish reversal pattern
- C- Sideways consolidation
- D- No clear trend

Ans- A

Explanation: The cup and handle is a bullish continuation pattern that indicates a price movement that trends higher after the cup and handle shapes have formed.

QUES 20:- What does the stochastic oscillator measure?

- A- The strength of a trend
- B- Overbought and oversold conditions
- C- Market sentiment
- D- Price volatility

Ans- B

Explanation: The stochastic oscillator finds overbought or oversold conditions by comparing an asset's closing price to its price range over a certain period.

QUES 21:- What is a 'false breakout'?

- A- The price breaks out, but the price comes back to the original range.
- B- Breakout failure above a resistance level
- C- Prices will remain within the support zone.
- D- When the trend resumes stronger after a breakout

Ans- A

Explanation: A false breakout is when the price breaks above resistance or below support but fails to hold the move and reverses fast.

QUES 22:- What is a 'tweezer top' formation?

- A- Bullish reversal
- B- Bearish reversal
- C- Continuation of trend
- D- High volatility

Ans- B

Explanation: A tweezer top, which appears when we see two candlesticks hauling the same high, is the bearish reversal pattern; that means the price will likely decline.

QUES 23:- What is the 'golden cross-over'?

- A- The 50-day moving average crosses above the 200-day moving average.
- B- When you hit the top price of a stock
- C- When RSI is above 70
- D- During a sudden surge in volume

Ans- A

Explanation: It is a bullish signal, meaning that the short-term trend is strengthening and the price will go up.

QUES 24:- How significant is volume in technical analysis?

- A- To confirm price trends
- B- To predict price targets
- C- For gauging price movement
- D- Help to find EPS

Ans- A

Explanation: Volume in confirming price trends. During a trend, high volume shows intense interest, while low volume shows weak trends.

QUES 25:- Which of these is not a kind of chart pattern?

- A- Triangles
- B- Flags and Pennants
- C- Cup with Handle
- D- Inflation spikes

Ans- D

Explanation: Inflation spikes are economic happenings, not chart patterns. Technical chart patterns include triangles, flags, pennants, cup and handle, etc.

QUES 26:- Which of these indicators guides you in spotting the momentum of the trend?

- A- MACD
- B- Bollinger Bands
- C- RSI
- D- Moving Average

Ans- A

Explanation: Moving Average Convergence Divergence is used to identify the strength of momentum and to indicate that it may reverse.

QUES 27:- What does bearish divergence mean in technical analysis?

- A- Possible continuation of the bullish trend
- B- A possible transition from an uptrend to a downtrend
- C- A consolidation phase
- D- A strong bullish signal

Ans- B

Explanation: A bearish divergence signifies when the price creates a higher peak but the indicator (such as RSI or MACD) creates a lower peak, implying dwindling momentum and a potential trend reversal.

QUES 28:- How does technical analysis work?

- A- Fundamental Analysis (Company Earnings and Fundamentals Review)
- B- Analyzing historical market prices and trends
- C- Predicting economic news
- D- Interpreting political shifts

Ans- B

Explanation: Technical analysis is a method of analyzing market data in the past, like price and volume, and determining how price will behave in the future.

Youth in India Embrace Stock Market Investments

The financial world is changing so fast and everyone wants to be on the profit side. That's why individual investors and students regularly take investor awareness programmes. Recently, IAP was conducted at a private management college in Gwalior where individual investors and management students learn about the post-effect of covid-19 on jobs economy and investment.

As we all know, The Covid-19 pandemic was the worst crisis since World War-2. Financial, social, and other consequences of COVID-19 will remain for many years. But as we know, everything has its pros and cons. In Indian History, for the first time ever, Demat Account across 10 Core. The Coronavirus badly hit the stock market all over the world, but the Indian economy witnessed a new investment trend. According to the data. Before Covid-19 in March 2020, there were 4 crore demat accounts and only in 2-3 years 6 crores of new accounts were reported.

As a country with the largest young population, expecting a booming economy, Indian young investors show an unprecedented degree of financial prudence. Most young investors directly invest in the market, without having proper knowledge.

You must have heard of Rakesh Jhunjhunwala and Warren Buffet, we know them as a big bull. They have made billions of dollars in the financial market. They used time as money and converted their money into wealth.

Benjamin Graham, known as the 'Father of Investment,' famously stated, "Investing in knowledge yields the most profitable interest."

According to NSE, 80 to 90 percent of investors lose their hard-earned money in option and day trading. Beware of fraud on YouTube and telegram channels. Atleast invest 10% in education of your investment.

HOW TO SELECT A MULTI-BAGGER STOCK?

Before selecting a multi-bagger stock, investors must investigate the business.

HERE ARE SOME KEY FACTORS FOR SELECTING MULTI-BAGGER STOCKS:

- Strong Management:** A business cannot succeed without strong management. Look at multiple aspects, like diversion of funds, pledging of shares, board independence, discipline, and obligation.
- Promoter Holding:** Find a stock that has good promoter holding which shows promoter confidence in their business.
- Good Earning:** An investor earns money when the company makes profits. Keep your eyes on the PE ratio and EPS.

Another crucial element lies in the marginal allocation of funds. Utilising technical analysis for enhanced timing and upholding a robust risk management strategy are imperative. For instance, a group of acquaintances invested 1,000 rupees in [REDACTED] in 1980, which burgeoned to 1894 crores by 2021.
